to have your harness repaired. Bring them on your next trip to town. Expert harness and shoe repairs. All work guaranteed. Our shoe repair department is up to date. We carry a full line of harness, saddlery, fancy leather goods, trunks and bags, shoe supplies, etc.

J. T. KINGSLEY

Why Gamble?

You may be lucky with horses—you may play a mean hand at poker—you may even be able to beat the stock market. But when it comes to the buying of a car, why gamble? Why trust to luck when you can buy with certainty an Oldsmobile. It will stand the closest inspection.

The low G. M. A. C. financing rates are available to purchasers of the Oldsmobile Six on time.

J. L. EDLUND, Agent.

"Seven Days"

Al. Christie's Feature Comedy

from the famous stage farce by Mary Roberts Rinehart and Avery Hopwood.

ALSO A GOOD TWO REEL COMEDY

CLARESHOLM LOCAL NEWS

G. M. Godfrey's spent the week end at Banff.

The Chautauque guarantee was signed on July 27.

Born to Mr. and Mrs. Harry Dow, July 31, a daughter.

Miss U. R. Blain left on Tuesday for a visit at Homeigen.

R. A. Shearer's have returned from spending their holidays at Banff.

Albert Hooper, of Stavelay, was a visitor at the Valetsko home on Sunday.

Mrs. O. D. Hadley, of Sand Point, Idaho, is visiting her sister Mrs. J. J. Callahan.

The merchants of Clareholm are offering real bargains on Saturday, August 7. See posters.

R. S. Law and family of Winnipeg spent three days renewing old acquaintances in Clareholm.

On Friday, the 13th, the Liberals of the Macleod federal riding will hold a nominating convention at Macleod.

Mr. and Mrs. W. Knight and Mrs. Oliver Mosley returned last Friday from California, traveling by motor car. They report an enjoyable trip.

G. G. Coote, former sitting member for the Macleod riding, was again chosen as the nominee at the U. F. A. convention at High River on Monday.

An auction sale of the horses, farm implements, etc., of Chas. McCow will be held at the Vahorn livery barn on Saturday afternoon, August 7. A. E. Kunkun, Auctioneer.

Al. Christie's feature comedy, "Seven Days," from the famous stage farce by Mary Roberts Rinehart and Avery Hopwood, at the Rex theater Friday and Saturday nights this week.

The ladies of the apron committee of the United Church are holding an afternoon tea on the lawn at Mrs. Eric Moffatt's on Friday afternoon, August 13. A cordial invitation is extended to all.

The weather for the past week has continued dry, and most of the days reasonably warm. In parts of the district crops have suffered some from the dry, hot weather.

At the time of going to press everything is set for the big Elks' sports day and carnival here. The dancing floor at the rink has been greatly enlarged over the size originally intended, so that the crowd will be fully accommodated.

A demonstration in millinery will be held under the auspices of the Clareholm U. F. W. A. on September 15-20. Anyone wishing to join the class, would they kindly let Mrs. E. W. Fenton or Mrs. Salmon know as soon as possible.—Secretary.

Gospel meetings will be held every evening, Monday excepted, in Sunday's hall next door east of the U. F. A. store, commencing Sunday, August 8th. R. G. Graham and Mrs. Graham, J. R. Kleven and Mrs. Kleven, will preach. All are welcome at these meetings.

Dr. J. S. Hynes, graduate of McGill, one year's postgraduate course in surgery, three years' general practice in Blairmore, who has just returned from an extended trip to Mayo Clinic, Rochester, Cleveland, Chicago and Montreal, has decided to open up an office and practice in Clareholm.

Golden Wedding at Clareholm

Thomas Dixon, county attorney for the county of Bruce, was married at Belleville by Bishop Albert Crutcher to Mary McKay, M. A. (Albert College).

On the 28th instant at the home of their son-in-law Mark Fisher, the members of the family residing within a travelling distance met to wish them many happy re-

turns of the occasion and to present them with suitable gifts.

Of the family there are four sons and one daughter.

The only persons present at their marriage and now known to be alive are Miss Margaret Carter, B. A., of Toronto, who is at present travelling in Italy, and Mrs. John Fraser (nee Millie McDonald) of Ingersoll.

The parties are now respectively 82 and 71 years of age.

Here and There

Stormont, the best mine in Nova Scotia, when gold-mining in the province was an industry, is to be reopened. Until it closed down, twelve years ago, Stormont mine had produced over 575,000 tons of ore, giving an average of free gold of \$13 per ton, or \$225,000 during its activity.

A second single shipment of Indian motor-cycles, consisting of 85 cases, from Amory, Mass., recently arrived in Tokyo, Japan, having come forward by Canadian Pacific Rail and steamer lines. The demand for motor-cycles in Japan is a steadily increasing one, being a cheap and convenient method of locomotion and well suited to the somewhat narrow roads of that country.

Twenty-one British Rotarians recently came over to Canada on the Canadian Pacific line "Montclair" en route to the International Rotary convention at Denver. On their return trip they came back through Canada, travelling to Winnipeg and Port William, and taking the Great Lakes trip on C.P.R. steamships to Port McNicoll. They returned to the Old Country by the C.P. line "Montclair."

The Canadian Pacific Railway has just added two of the new Mount Clear observation cars to those running out of Montreal. Five more are just about ready to run and the balance of four cars will be ready for service shortly after these. They are all-steel cars, made up of three compartments, and one drawing platform. They will be a feature of long-run trains on the C.P.R.

The English football team now touring Canada had one of the most strenuous workouts in the history of any athletic body. Staying for a week-end at the Chateau Lake Louise they had a practice at an altitude of a mile and a half above sea level, where the thinness and dryness of the air had a wonderful effect upon them. Their captain thought it remarkable that prize-fighters in training had not utilised the marvellous properties of this training camp.

A fourteen-car special Canadian Pacific Railway train carried more than a hundred of the most prominent representatives of banking and financial interests of New York City and State to Quebec, where they held their 33rd annual convention of the New York State Bankers' Association at the Chateau Frontenac recently. Included in the party was Col. J. W. McIntosh, Comptroller of Currency, Washington; and W. J. Donovan, Assistant Attorney-General of the U.S., and several financial specialists of New York's leading newspapers.

While Canadian Pacific train No. 87 was standing on public crossing preparatory to taking passing track, an automobile, occupied by four persons, ran into the side of the train, endangering the auto. In another case, a driver said he saw the train and heard the whistle signals, slowed, but too late to avoid running into the side of the engine. Yet again, a touring car, travelling about 20 miles per hour, ran through the crossing barriers at a public crossing in Montreal but did not stop. No injuries were reported in all three incidents.

Representing capital running into billions of dollars, a party of around eighty prominent bankers, financiers and men representing commercial and business interests, recently arrived at the Windsor Street Hotel, Montreal, from New York, and made a tour of the pulp and paper industries and the new aluminum districts of the St. Maurice and Saguenay Valley in Quebec Province, with a view to serious inspection of the prospects in these great developments. The party was accommodated with five first-class room compartments and drawing room sleepers, two dining cars, and the whole big C.P.R. engine.

Canada's Year Of Jubilee

The Dominion of Canada has entered upon its diamond jubilee year and on July first next year Canadians will celebrate in a fitting manner the sixtieth anniversary of Confederation.

It will be most timely and in every way appropriate if in the months intervening before that historic date all Canadian organizations make it the chief item in their programmes to study Canada, past, present and future, and to present facts to their members and the people generally relative to the history, the development, the resources, and the boundless possibilities of the country.

Canada's diamond jubilee year presents a glorious opportunity to all our organizations to make this a "Canada First" year. Would it not be a fine thing if, say once a month, every Canadian Club, Rotary Club, Kiwanis Club, Lions, G. G. and other service organizations, every Homeowners and Community Club, the Canadian Legion, all fraternal bodies, I.O.O.F., Y.M.C.A., Y.W.C.A., United Farmers, churches and schools devoted a meeting to some one phase of Canadian life, history or development.

Indeed, why should the Departments of Education of the several Provinces not arrange a special programme of study in regard to Canada, all designed to make our people better informed regarding the constitutional development of government in Canada, our position in the Empire in the League of Nations, and better acquainted with the principles and procedure of government in Canada, the administration and enforcement of law, in a word, the growth and development of Canada from the status of a Crown Colony to a self-governing nation within the Empire and with full nationhood among the nations in the League of Nations?

This jubilee year presents a golden opportunity for the presentation of historical plays and pageants designed not merely to entertain and bring out the artistic qualities of our people, in their preparation and presentation, but also to instruct in a most effective way.

The twin Provinces of Alberta and Saskatchewan are this year celebrating their coming of age as autonomous provinces, and advantage is being taken of this occasion to depict in various ways the growth and development which has marked the past two decades. In a special way these facts are being presented by floats in parades in connection with our summer exhibitions. But why should plans not now be made not only in the West, but throughout the length and breadth of the Dominion, to present at every exhibition next year through means of floats, pageants and pageants the Canada of 1927 as contrasted with the Canada of 1867?

Canadians, it is true, are not much given to this sort of thing. We are a reserved people and have always displayed our feelings and emotions. We are not given to flag-waving. But surely all can unite in making the diamond jubilee year of Confederation an exception. We have hundreds of thousands of citizens, born in other lands, who have chosen Canada as the land of their adoption. This jubilee year should be so utilized as to acquaint them with Canada's past history and achievements, to instill in their hearts and minds a real pride in Canada, to encourage them to devote to the cause of Canada in every true sense and none of the name.

If for one solid twelve month the people of this Dominion thought, talked and preached Canada, the cumulative effect in the arousing and development of a real national spirit would be tremendous. It would operate to break down old barriers of race and creed, would wipe out purely sectional considerations, jealousies and suspicions, and create an entirely new spirit throughout the land.

Canada is worthy of the very best that her people can give to it. Let us unite, therefore, in giving to Canada one year of unqualified loyalty, consideration and unselfish devotion—a year of study of Canada, of year service in endeavoring to arrive at a fuller understanding of her problems and needs, a year of unremitting effort to solve those problems and meet those needs.

Objectionable Motor Signs

Moved from New Jersey to Revolve Licenses of Motorists With Offensive Placards

Commissioner Dill, of the New Jersey motor vehicle department, said he will attempt to revoke licenses of motorists who display offensive signs beneath their rear windows. Commissioner Dill said he believed this step was the only possible one to abate the evil. He added it was wrong to offend the public with placards on cars which profanely were being displayed.

One of the signs to which he objected particularly reads: "If you can read this you are too damn close."

Fish Fossils In Oil Well

In drilling an oil well recently near Medicine Hat, a stratum of fish and shell fossils was found. The fossils were struck at a depth of 3,770 feet, and it was apparent that they were being washed into the well. Other finds were reported, from pyrites and tetrums were found in varying depths, the tetrums rock being about 750 feet down.

Okanagan Lake Service

New C.N.R. Steamship Service On Okanagan Lake

Announcement is made of the opening by the Canadian National Railway of a steamship service between Kelowna and Penticton on the Okanagan Lake. A new steamship, the Penticton, will make two trips each way, except Sunday, starting July 15. This extends the passenger service which was put into operation in 1926, and completes some months ago of the new Canadian National line between Kelowna and Kelowna and gives a complete service from Penticton out to meet with the Continental Limited east and west from Kamloops.

Australia Overrun With Cactus

Within a few short years Queensland, Australia, has become practically overrun with cactus. Some settlers, who make two trips each way of the plant known as the prickly pear, which spread before the farmers took any action. Now the cactus has spread over much of the arable land of the province, which is 67,000 miles square.

Moscow Shirks Responsibility

Could Have Prevented Financial Help Being Sent To British Strikers

Moscow obviously is lying when it tells Great Britain that it is unable to prohibit Russian "trades unions" from sending money abroad to aid trades unions in other countries and discharging all responsibility for the financial help sent from Russia to British strikers. When the general strike was on, and afterward, upon refusal of the managers of the strike to accept it, transferred to the miners' federation. If, as the Soviet official asserts, there is no prohibition in its domain "against the remittance of money abroad, but only the obligation to obtain a permit for such remittance," that prohibition is lacking because the Moscow chiefs for their own reasons have freely let down the bars, and the very statement that a permit is necessary is an admission that it lies within the power of Bolshevik government to put them up again at any time, and in any particular instance, as it pleases.—Detroit Free Press.

2 Years' Backache

Subdued by "Nervine"

"Backache was the bane of my life and for two years I was no more able to be useful for work," writes E. S. Sloane, from Fort George. "While in Smith Bros' Drug Store, I heard of Nervine being used with such success in my case, and today I am perfectly well." All those who suffer from weak, aching backs, those whose muscles are stiff, and those who are troubled by Nervine—the instant that never fails. Write for literature.

Manitoba Industries

The latest group of industries in Manitoba, in the number of establishments, is wood and paper products, of which there are 215, according to figures furnished by the industrial development board of the province. Next in order come vegetable products, with 197, and chemical products, with 119; and textile products, with 59.

GIRLHOOD DANGERS

Come Through a Weakening of the Blood—A Tonic is Needed

In their early teens it is quite common for girls to feel weak, nervous, strength, and mothers should carefully watch the condition of their daughters at this time. It is when the strength is sapped by rapid growth, when the blood is weakened, and the first signs may be noticed by nervousness, headache, dizziness, and general weakness, pale, breathlessness and palpitation become apparent, with low spirits and depression.

Neurotic ailments often lead to a decline, but if you see your daughter's blood is enriched, there need be no cause for concern. The first blood purifier ever discovered, Dr. Williams' Pink Pills. They will build up the girl's health, and ensure for her healthy womanhood. In proof of this, George Johnston, proprietor of the Harbor, N.B., says: "I think Dr. Williams' Pink Pills are the best medicine I have ever known. Margaret was in such a badly run-down condition that she could not get up stairs without a decline. Her face was pale, the hair falling out, and she was suffering from headaches. She had no appetite and lost a lot in weight. To my surprise, when she began taking Dr. Williams' Pink Pills, she began to gain weight, and her health improved. But the best of the use of this wonderful medicine is the fact that she is now showing no signs of the trouble that had so weakened her."

In all troubles due to weak, watery blood, Dr. Williams' Pink Pills will be found a helpful remedy. Sold by all medicine dealers or sent by mail at 50 cents a box by The Dr. Williams' Medicine Co., Brockville, Ont.

Invited To Palace

Spanish Workman Did Not Recognize King Who Gave Him Lift

There is an old story told in the city of Madrid. A man was invited to the palace of Spain.

Driving recently just outside Madrid, the king's car came to a standstill, and a minor adjustment had to be made by the chauffeur. At that moment the king was walking in the same direction, and, not recognizing the king, asked him for a lift as he passed. The king, with a smile, told him to jump up, and the car conveyed him swiftly to his humble dwelling in the slums of Madrid. Then the king, with his hands with the amazed workman, who had begun to thank him, "Goodbye old man," he said. "Have a good rest, and if you want anything at any time, come and see me at the palace."

More Bicycles Than Cars

Every sixth person in France has a bicycle, the total number being about 6,000,000. There are less than one as many bicycles in the country as automobiles.

Wheat Pool A Huge Success

Chairman of Saskatchewan Pool Declares It To Be A Biggest Success Ever Dreamed Of

At a wheat pool meeting held at Melville, Sask., recently, and attended by over three hundred farmers, A. J. McPhail, chairman of the Saskatchewan Wheat Pool, stated that a determined effort would be made to increase the pool average by another million this season.

"The Pool," said Mr. McPhail, "is a far bigger success than any of us ever dreamed of; it will have a great influence in stabilizing prices; it is a great unifying influence uniting the farmers of the three western provinces; it is the greatest business that agriculture has ever engaged in and no man can see what it may grow to; it has done the farmer a great deal of good which he never had before and its success has shown that the farmers can stick together." It was not and never has been the intention of the organization to control wheat with the object of artificially raising the price. To do so, he said, would tend to defeat its own object, for in that case wheat would be grown to a much larger extent and thus greatly increase the supply.

Japs Interested In C.N.R. Radio

Travel Over System to Secure Pictures On How Plan Works

For the purpose of investigating the progress of radio in Canada, particularly its work in the world of transportation as developed by the Canadian National Railway, Kijima, of Tokyo, Japan, and K. Toga, of San Francisco, are travelling over the system on radio-equipped trains. According to Mr. Toga, the Japanese Government railways are now experimenting in the establishing of radio on their lines, and they intend to secure an insight into the conditions under which radio-equipped trains operate over Canadian National lines.

Novel Racing Contest

Aeroplane Travels Faster Than The Fastest Pig

An aeroplane has proved 25½ miles an hour faster than the fastest pig in a race between two planes and 50 tonning pigmen. The novel contest was held between Hammond and Auburn, natives, entries taking the straight line course of 60 miles while the planes, one of which was forced down, were scheduled to fly 62 miles.

Despite the 15 miles handicap the winning plane finished three minutes ahead of the first pigman, completing the longer distance in 48 minutes, or 82½ miles an hour.

A compound has been invented which counteracts the effectiveness of poisonous gas.

If you find that you are being forced to despair, get out and walk.

Minard's Liniment For Rheumatism

Wireless Phones For Aeroplane Passengers

Experiments Between Pilots in Germany Prove Successful

Passengers on the huge air liners of the German Air Service, which on some planes furnishes movies and phonograph music for the diversion of air travellers, will soon be able to pick up a wireless telephone receiver and, despite the roar of three 120-horsepower engines, talk with any telephone subscriber in any large city of Germany.

Wireless telephone experiments between pilots on two of the night air routes and landing fields have proved successful. The pilot circling over Stockholm in a thunderbolt talked with Telephoner Pilot in Berlin for five minutes.

The Air Service directors are not sure that wireless telephones will be placed at passengers' disposal first on the routes between Berlin-Berlin, Berlin-Stettin-Stockholm and Berlin-Danzig-Königsberg.

The phones operate in the same manner as the wireless telephone used on trains between Berlin and Hamburg.

Girl Receives Bronze Medal

Heroine of Lighthouse Awarded By Committee of Lyaids

The committee of Lyaids has awarded the Lyaids bronze medal for meritorious service to Ethel Langford, 15-year-old daughter of the keeper of St. Helens' Fort, Lighthouse, Bonbridge. The medal is given her in recognition of her endurance in keeping the lighthouse working for three years during a gale last March. The girl was left on the lighthouse while her parents made a dash for shore to reach the fort. She calmly and bravely remained. They could not get back owing to the gale. For three days she kept the light working for her parents who were in the fort. Undaunted, she kept the light going, climbing twenty feet up a steel ladder to repair the lamp. All the food she had was two pounds of bread, and when her parents returned she was quite well and cheerful.

The Lyaids bronze medal has not been previously awarded to a woman, but the silver medal was conferred upon the wife of a ship's captain in 1897.

Use Bad Language

Modern Mother Responsible For Great Increase in Use of Loose Speech

Bad language of two modern mothers is responsible for a great deal of loose speech among school girls. Miss Mary Morrison, principal of the French Canadian School for Girls, told the annual conference of the head mistresses' association at London.

"For years we have made allowances for father's strong language," Miss Morrison said, "but now the mother is nearly as bad, and it is having a serious effect on the girl's speech among themselves. This is all a part of the so-called greater freedom."

Confidence Men in England Use Crossword Puzzle

Crossword puzzle handles are latest things in British crookedness. Even the Englishman's reserve cannot withstand the desire for advice in the search for words to fill the crossword puzzle squares. Hotel lounges are the favorite haunts of crooks who wrinkle their brows over a rare Australian bird in three letters, and then lean over to a prosperous squig from the country to ask for aid. Sooner or later the conversation turns to quick-quick schemes. Scotland Yard is on the trail of two crossword puzzle crackers who posed as gentleman farmers and separated a real dirt farmer from Aberystwyth from his bank roll. The confidence men are described as suave and well-spoken but poor spellers.

Powerful Medicine. The healing properties of six essential oils are concentrated in the form of Dr. Thomas' Electric Oil, forming one of the most beneficial remedies ever offered to the use of man. Many can testify as to its power in allaying pain, and its effect in restoring to the user their own health to it. Its wonderful power to cure is attested by the small price at which it sells.

He had just arrived from the old country and was not familiar with the use of the telephone, so he took down the receiver and cried out:

"Any want to talk to my wife."

The operator's voice came back sweetly, "Number, please?"

"Oh," he replied, "she bans my second view."

The Miller's "Worm Powders and the battle against worms is won. These powders correct the morbid conditions of the stomach which nourish worms, and these destructive parasites cannot exist after they come in contact with the medicine. The worms are speedily evacuated with other refuse from the bowels. Sufferers are impured to the organs and the health of the child secured.

In a certain town in Italy the taxes are levied according to the weight of the taxpayer. The fat man is assumed to be prosperous and charged on his pounds.

The oldest boat in England is the famous Royal Barge built by King William I. 1066.

Two Prairie Provinces Will Attain Their Majority In Regard to Age On Sept. 1st

The two Canadian provinces of Alberta and Saskatchewan have attained their majority in regard to age on September 1st. They will then be 21 years old as provinces of the Dominion. Prior to that date the area they now embrace had the status of territories administered largely by the Canadian Federal Government.

The occasion of the two provinces reaching their majority provides an interesting retrospect. In 1905 the combined population of Alberta and Saskatchewan was 700,000 in round figures. It is now 1,500,000. The value of the annual agricultural production has increased in 21 years from about \$400,000,000 to \$750,000,000.

Alberta's wheat area is now nearly thirty times that of 21 years ago. The production of grain is nearly fifty times as great as in 1906. The average yield of wheat in 21 years has been over 18 bushels to the acre. Last year 21,000,000 of the 60,000,000 acres suitable for farming are sown to field crops.

In this period Alberta has developed a dairy industry with production totalling in value more than \$20,000,000 annually. Twenty-one years ago Saskatchewan produced 26,000,000 bushels of wheat. Last year the yield was over 240,000,000 bushels, more than twice the total wheat production of the Dominion. It is now the principal wheat growing area in North America, if not in the world.

While wheat is still the main crop, mixed farming has made rapid progress in all parts of the provinces. Twenty-one years ago cattle was imported by the carload into the province. Last year the creamy butter production amounted to over eight hundred and fifty thousand pounds. There still remains 58,000,000 acres in Saskatchewan suitable for profitable farming.

These two youngest of the nine provinces that form the Federal Union of the Dominion of Canada are now old enough to be proud of the robust state of their progress in 21 years.

Amateur Mushroom Cultivation

The Fall Is the Best Time For Preparing Beds

Few people have a taste for mushrooms and many would like to grow them. The latter would be well advised to send to the Public Health Branch of the Department of Agriculture at Ottawa for Circular No. 45, wherein Mr. H. T. Gussow, the Dominion biologist, tells of the requirements of a promising bed of mushrooms. The circular, it might be stated, has been specially prepared for amateurs, who are advised to grow slowly at the start and to take care that the fundamentally important facilities are provided. In the first place the cultivation of mushrooms out of doors in Canada is not recommended as a warranted success. As they do not require light, a cellar below a dwelling or a place covered for storing vegetables will answer. The fall of the year is considered the most suitable time for preparing the beds. The fundamental requirements, says Mr. Gussow, are the facilities, with which the requisite temperature and degree of moisture may be maintained and controlled, keeping these elements at a uniform level, before the first conditions to success. Nothing, says our authority, seems more disturbing than sudden drops in temperature or the absence of a system of ventilation preventing the regulation of moisture in air and bed. Proceeding from this caution the circular deals with the necessity of manure and methods of treatment, preparation of the beds, the spawn and specific manner of cultivation.

Holland Farmers Progressive

Buy and Sell Bulk of Products on Co-operative Basis

Because Holland is an agricultural nation, the exceptional progress made there in agriculture since the war has attracted wide notice. The farmers buy the bulk of their materials including seed, fertilizer and equipment, on a co-operative basis and two-thirds of their crops and dairy products are handled through co-operative agencies. This has increased the percentage of butterfat it contains and this is having an effect on the productivity of the herds.

Mother: "Oh, my boy will die! My boy will die!" she sobbed. "He will not take the medicine that would save him!"

Father (in bed): "Don't cry, mother, father'll be home soon and he'll make the lake." "No, but we have some very nice dog biscuits."

W. N. U. 137

Spraying Potatoes For Late Blight

Losses May Be Entirely Eliminated by Thorough Spraying

Late blight, a disease of potato foliage, is most destructive, and in some years causes great loss. The loss can be greatly reduced, if not entirely eliminated, by careful and thorough spraying with Bordeaux mixture made up of 4 pounds of copper sulphate (bluestone), 4 pounds quicklime and 40 gallons of water. Spraying should begin about the middle of July, using about 60 gallons per acre, the amount being increased as the plants grow larger. As many as five or six sprayings necessary and the utmost care, if potato beetles are prevalent, and a half pound of arsenate of lime should be added to each 40 gallons of solution as an insecticide. Spray before rain, rather than after.

In making the solution for spraying it is more convenient to use stock solutions and dilute them as required. The following instructions for preparing stock solutions are given by J. H. MacNeill, plant pathologist at Ottawa.

The bluestone stock solution is prepared by dissolving 40 pounds of copper sulphate in a barrel containing 40 gallons of water. For the lime stock solution 40 pounds of fresh quicklime are slaked in a barrel by gradually adding water, while thoroughly mixing, until the slake contains 40 gallons. These barrels of stock solution should be kept carefully covered to prevent evaporation. For the lime stock solution 40 pounds of fresh quicklime are slaked in a barrel by gradually adding water, while thoroughly mixing, until the slake contains 40 gallons. These barrels of stock solution should be kept carefully covered to prevent evaporation.

It is desirable to increase the proportion of copper solution in the later sprayings, using the formula 4:3:20, preparing the stock solution in the same proportion. The only difference is that six gallons of stock solution of bluestone are added instead of four, and 20 gallons of water instead of 22.

Losses During Haymaking

Rough Handling Is the Cause of Serious Damage

The time of cutting of various forage plants for hay purposes plays a very important part in both the total amount and the palatability of the hay. The time of cutting even though the crop is cut at the present time, the subsequent method of handling may result in serious loss. The following practices are recommended by G. P. McNeill, forage crop specialist of the department of agriculture at Ottawa, and which will preserve the original food value during the curing process: Get the hay into swaths or cocks before the leaves become dry through toasting. In showery weather cut only limited quantities and get this cocks up as soon as it is fit; handle as lightly and carefully as circumstances will allow.

Rough treatment of the harvested fodder during curing, or allowing it to lie in the swath until the leaves are lost, especially in the case of the clovers and alfalfa. It should be remembered that the leaf is not only the most palatable portion of the various grasses and clovers, but contains a considerably higher percentage of protein than do the stems.

Our National Wealth

Wealth Per Capita Stands High in Comparison to Other Countries

In estimated national wealth in millions of dollars, Canada stands seventh on the list, higher than Austria, Italy, Belgium, Argentina and Iraq. In fact, more than half of the new countries, according to Dr. D. M. MacGibbon, professor of political economy, University of Toronto, in his recent book, "The Wealth of Nations," Canada is only surpassed by the United States and Great Britain. Canada is among the nations showing a surplus on current account and is also among those countries having a food surplus. She ranks fifth in the world in wealth per capita, and seventh as an importer.

The Overhead

Ross: "What's this item on your expense account? 'Overhead expense'?"

Travelling Salesman: "That was an umbrella I bought."

Just As Good

"Do you have animal crackers?"

"No, but we have some very nice dog biscuits."

Miss MacPhail Commends Egg Grading

The Guarantee of Quality Raises the Standard

Miss Agnes MacPhail, member of parliament for Southeast Reg., put in a good word for egg grading during a discussion of the subject in the House of Commons. The discussion arose from an offered amendment to the egg grading regulations. She commended the having their eggs graded when offered for sale on a public market. Miss MacPhail had from experience learned of the advantages of marketing eggs through a co-operative system. The effect of grading, she claimed, is, in the first place, to raise the standard. The consumer, she pointed out, is guaranteed that if he buys, he will get just the quality he wants. Anyone who goes into a store and purchases "extra" or "pullet extra" will know exactly what he is getting. The standard has been raised, and on account of the guarantee of quality the consumption of eggs is increased. The eggs produced on Miss MacPhail's farm had, since egg grading came in, been shipped out through a co-operative pool. The eggs are taken from the nest twelve days and the nests are kept perfectly clean. Eggs having the slightest yellow or other defect are not shipped. In fact only such eggs are shipped as are strictly fresh and will be likely to grade extra "pullet extra" or "pullet extra."

Those who pool eggs in Ontario, Miss MacPhail claimed, are increasing in number all the time and are very much in favor of the grading principle. After a considerable discussion in the house by several members, the proposed amendment was carried. After the committee on agriculture and colonization where it was again discussed and the resolution ordered to be filed without further immediate action.

"The collection this morning," observed the vicar, "will be taken on behalf of the arch fund, and will be generously prized in the service papers, on behalf of the arch-fund."

The days are past when the grocer used to suck a potato carefully on the spot of a kerosene can.

The Care Of Growing Pullets

Development of Pullets For Early Winter Egg Production

Good parent stock, good shade range, a well balanced ration and comfortable housing are essential for the development of pullets for early winter egg production. Without a free range they will not be properly matured before weather conditions make it necessary to put them into winter quarters. Dry, well-drained land with plenty of shade and growing green feed are essential.

From the age of two months a dry mash, consisting of equal parts, by weight, of cornmeal, bran, shorts, ground oats and beef scrap should be kept before the pullets constantly to self-feeding purposes. In addition a vitamin mash consisting largely of chopped green feed such as mangold tops, alfalfa, clover, cabbage leaves, corn or sunflower tops, etc., should be given twice a day. It is also necessary to keep before the pullets constantly a hopper of good mixed grain and a supply of milk. Clean, fresh water should be before the birds at all times and oyster shells and grit should be always available.

The pullets should not be kept in the same quarters as hens. A portable colony house on skids can be made inexpensively. It should be dry and well ventilated with plenty of space, as on no account should they be overcrowded.

Co-operative Hatchery

Will Be Established in Calgary in the Near Future

A province-wide co-operative hatchery and brooding establishment will be started in Calgary in the near future, to serve as a nucleus for similar establishments. It is the object of the establishment to have four units of the first year. Each unit comprises a 15,000 egg capacity electric incubator and 600 feet of brooding houses. The farmers will send their eggs to the hatchery, and the hatchery will send the large incubators and the chicks kept until they are old and strong enough to look after themselves, when they will be shipped back to the farm.

It's easy to be patient when you have nothing to stake.

Agricultural Colleges Have Contributed Enormously To Farming Industry In Canada

Western Land Prices Low

Great Inducement For Immigrant Farmer Says Governor of Hudson's Bay Company

Speaking at the annual meeting of the Hudson's Bay Company in London, Charles Vincent Sale, governor of the company, in referring to the heavy taxation of the company reminded the proprietors that it all had been charged to capital receipts in respect of land. Consequently 2,818,000 acres which still remained in possession of the Hudson's Bay Company, were an entirely free asset.

The governor pointed out that the present price of land in the prairie provinces of Canada was lower than that of similar land in any other part of North America, despite the fact that the average tax on farm land was lower in Canada than in the United States and the average yield of spring wheat was high.

Available figures suggested that the prices of farm lands in Canada were as low as they ever would be, he continued.

Here, then, was the great inducement which Canada offered to the immigrant farmer—the cheapest land with the highest yield in the North American continent.

Wool Exports

Total exports of wool from Canada in the fiscal year ending March 31st, 1926, amounted to 6,517,476 pounds, valued at \$2,424,287, as compared with 6,625,264 pounds, worth \$2,434,224 in the previous fiscal year. Contrary to the previous year, when the United Kingdom received large shipments, practically the entire export clip went to the United States, which took 4,468,000 pounds, valued at \$2,325,754.

Among the words that indicate the approach of warfare are these: They will make their home with the bride's parents.

Trail Riders' Third Annual Pow-Wow

1. Ready to go after plucking camp 2. Scouting ahead.

The grave old mountains that surround the beautiful little Parnian valley near Lake Louise will hear and see things this summer that will remind them of the good old days when Indian hunters and warriors made the hills echo with their shouts when they danced about their great campfires; for this lovely spot has been chosen by the club to hold the annual Canadian Rockies to be the place where they will hold their third annual Pow-Wow on August 1, following the official trail ride.

Many parties have camped in Parnian Valley, but never such a large number as will be gathered for the world to attend their great feast. The deep silence of mountain and lake will be broken for one day when the hoofbeats of several hundred ponies sound through the valley.

From 10 o'clock in the morning the Pow-Wow of 1926 will be bigger and grander than those of previous years. At noon on August 1, two parties of trail riders will meet at the camp in the valley. They will pick their trails, and when night falls, light a great fire around which all will sit and sing. There will be two official trail rides this summer, both a five-day ride and a three-day ride. Members going on the longer ride are meeting at Lake Louise, so famous for its beauty and its magnificent Canadian Pacific.

Chateau, on July 29, and following the trail, up the Bow Valley to Morogito Creek, making a side trip to Bow Pass, then up over Molar Pass, and up the Little Pipestone to Baker Lake, so by the Parnian Lake to Parnian Valley. They plan to make 20 miles a day for the first three, 16 miles on the fourth day, and 14 miles on the fifth. Those taking the three-day ride will start from the Banff-Lake Louise road, follow the trail past Johnston Creek to Baker Creek and Baker Lake, and so to Parnian Valley. This party will travel more leisurely, making about 14 miles a day for the first two and nine miles on the third day. After the Pow-Wow all the trail riders will follow the trail past Johnston Creek to Baker Creek and Baker Lake, and so to Parnian Valley.

The Order of the Trail Riders is of just three summers old this year, and already has a membership of about 600, more than 360 of which have enamel buttons showing that they have travelled more than 2,500 miles.

rest have buttons, too, different kinds, according to the distance they have travelled: a bronze button for 50 miles, a silver one for 100 miles, a gold one for 500 miles, and a red and white enamel one for 1,000 miles.

Its aims are chiefly to encourage horseback travel through the Rockies, to promote the breeding of suitable saddle horses for high altitudes, to keep up old trails and build new, to protect the forests and encourage the love of outdoor life and the study and conservation of wild life, to prepare and circulate maps of existing and proposed trails, and help maintain the observance of close and open areas for fish and game.

The order has recruited its members from all classes, all ages and all parts of the world. Last year's Pow-Wow was attended by artists, writers, European nobility, Indian chiefs and American millionaires. Leading the ride was a lady of seventy, while a lad of twelve brought up the rear.

Articulate colleges, demonstrating and experimental farms have enormously increased production in Canada and have very considerably more than paid for their upkeep in that and other respects.

Principal J. B. Reynolds, of Guelph Agricultural College, in the course of an address at a luncheon, under the auspices of the Kiwanis Club of Ottawa, and members of the Canadian Society of Technical Agriculturists. Principal Reynolds urged there might well be a science of agricultural apologetics, as there was of theological apologetics, the idea being to bring home to the people at large the enormously beneficial results of technical training and of scientific agriculture. He pointed out that the choice may lie as between fewer men farming on scientific lines and with a higher standard of living, and many farming, but with a low standard of living. According to some agriculturists it was not difficult to account for a certain amount of exodus from the farm as the need for so many men working is reduced by scientific methods.

The principal was not enamored of so-called scientific farming. "He told of a friend who merged six one hundred acre farms into a single one hundred acre farm, and when he saw him recently he had had to send several thousand dollars from his city bank to make up the loss on the operation of the big farm."

Free Homesteads Taken

A Great Deal of Free Land Is Still Available in the West

In the month of May this year 245 homesteads were taken up in Western Canada, an increase of 231 over the number of entries in May, 1925. The total number of homesteads taken up in the month of May was 245, of which 133 were in the Prairie Provinces and 112 in the Moose Jaw district. In Alberta the entries totalled 226, of which 149 were in the Edmonton district, 44 in the Calgary and Grand Prairie, and the remaining 15 in the Calgary and Lethbridge districts. The entries in Manitoba totalled 76, of which 54 were in the vicinity of Dauphin and 16 in the Winnipeg district.

The Canadian Government still has fairly large areas of land for homestead entry in Manitoba, Saskatchewan and Alberta, and in the Railway Belt and Peace River Block in British Columbia. Free grants of 160 acres are made to British subjects or those who declare their intention of becoming British subjects. An entry fee of \$10 is charged by the Canadian Government and certain conditions of residence and cultivation are required to be fulfilled within three years.

The homestead lands are now a considerable distance from the railways—40 to 60 miles—and consequently settlers with some capital may regard the purchase of good farm lands close to railways and main roads as an acre on long terms of payment as a better economic proposition.

Have Means of Communication

Scientists Are Working On Bees'

The mystery of communication among bees has been for years a subject of careful inquiry, with the following information as a result. Bees have a system of rhythmic dancing during which they form chains and knots. The newswriting bee indicates by the action of the dance whether the new find is honey, flowers, pollen or other food. Even the description of the find is communicated, this by means of a scent organ or gland which has hitherto escaped the attention of microscopists. Scientists have made an interesting series of check experiments designed to determine whether the color of flowers in any way affects bees to locate food supplies. It does not. Flowers have been taken by placing the inside of one flower in the petals of another, so that it has been possible to deceive the bees. A thorough understanding of how bees transmit their news is a key to the solution of mysteries of insect communities and further of practical value to beekeepers.

Not Too Exciting

Teacher: (To a man who is making out a list of names) "I beg your pardon, sir, but in case we don't meet again, may I have a couple of digits out of the pocket?"

She: "A dollar doesn't go as far as it used to."

He: "No, but it goes faster."

Here and There

Tremendously rapid development of forest and water power resources of the Province of Quebec is indicated in the forecast of revenue totalling \$6,000,000 from those sources for the current year. Last year the same resources produced a revenue of nearly \$1,500,000.

Sixty men from the training camp in Brandon and Claydon, England, have been accepted by the Canadian Government and sailed on the "Empress of France" at the end of June. They proceeded to Winnipeg after landing at Quebec and will be placed on specially selected farms.

Saskatchewan exported last year 77.4 per cent. of its total production of creamy butter, according to a statement made by the Provincial Dairy Commissioner. The increase in production in 1922 over that of 1920 had amounted to 126.8 per cent., the output last year totalling 158,432 pounds.

Close on one hundred pilgrims from St. Paul and Minneapolis passed through Montreal recently on their way to the famous shrine of Ste. Anne de Beaupre, near Quebec. They were the advance guard of the great army of pilgrims that will visit the shrine every year. While stopping off in Montreal they visited the St. Joseph Oratory in that city, also well-known as a shrine.

Hundreds of students and co-eds from Canadian and American universities have been passing through Montreal recently to board ships for Europe in connection with the Overseas Collegiate Tours that have grown increasingly popular of late years. Many of these collegiate travel by Canadian Pacific boats, the "Empress of France" on a recent trip carrying over 250 of them.

Clad in gorgeous scarlet tunics, plentifully decorated with gold braid, forty members of the world-famous Coldstream Guards Band, of London, reached Quebec recently on the Canadian Pacific liner "Montcalm" on their third visit to Canada, having been here in 1904 and again in 1911. Under the command of Lieutenant R. G. Evans they will play at Brandon, Calgary, Edmonton, Saskatoon, Regina, Vancouver and the Toronto Exhibition.

The electrification of the main line of the Imperial Japanese Government Railway system from Tokyo to Shimonoeki, 750 miles, has been long projected, and recently the 45-mile section between Tokyo and Odawara has had experimental trains drawn by electric locomotives run twice a day between these points, owing to the great expense involved it is feared it will be many years before the entire main line can be electrified.

Founded 92 years ago in gardens on the site of which the Canadian Pacific Railway Windsor Street Station in Montreal now stands, the St. Jean Baptiste Society of that city celebrated that event on June 24th last by having a memorial tablet affixed to the walls of the station. The tablet was the gift of Victor Morin, former president-general of the society, who was present and unveiled it.

Negotiations have been completed for the erection, and work will shortly commence, upon a terminal warehouse and cold storage plant, to cost about five million dollars and to be built in Montreal. It is stated that it will be constructed within ten months from the end of June, and will have ten stores in height and will have a total space of 600,000 square feet, of which one-third will be for cold storage. The plant will be built by the Montreal Rail and Harbor Terminals, Limited, and cost will be financed by Municipal Bankers' Corporation of Toronto.

AFTER TWENTY NINE YEARS

It is twenty-nine years since the first Oldsmobile was built. Twenty-nine years ago men looked amazed at automobiles—called them, fads and novelties—predicted their early failure. But Oldsmobile continued to build cars—continued to improve them—and, from the very beginning, Oldsmobile production volume has been steadily increasing.

Yet the price was unbelievably low—as a result of the combined purchasing and production facilities of General Motors.

Now—Oldsmobile has completed another great and successful year.

Buy With Confidence

The spirit which has animated Oldsmobile throughout the past quarter-century still guides Oldsmobile to further achievement. You can buy Oldsmobile with the full confidence that it brings to you the foremost thought of its time—the greatest fund of experience in all the automotive world—the car which its builders feel measures up to the Oldsmobile Creed.

That the Canadian family may have, at a moderate investment, a car that gratifies their finer tastes as well as satisfies their most essential need—that Oldsmobile shall not be wanting in a single essential factor that contributes to performance, comfort, beauty or long life.

That in the design, material and manufacture of every detail the strictest standards shall be rigidly maintained—that the boundless resources and matchless facilities shall be utilized to the utmost to provide these qualities at the lowest possible cost.

It is accepted as a trust with the firm determination that nothing shall ever deflect the loyalty of Oldsmobile from this ideal.

This—our steadfast pledge—is your firm assurance.

Some Good Wood Preservatives

Cresote and Liquid Sulphur is Used With Success

The natural resources intelligence service of the department of the interior at Ottawa, says:

Fence posts, poles, bridge and wharf timbers, shaft, timbers, planks, roof decking and general construction lumber will last many extra years if properly treated with preservatives. This is a point well demonstrated by the railway companies who now make it an almost universal practice of treating their ties, usually with a cresote preservative. Coal tar cresote is used chiefly one of the best preservatives and at many points throughout Canada large plants have been established which are engaged in the treatment of railway ties, piles and timbers for many other purposes.

The use of fence posts, viaducts, staking, planks for walks and other small dimension timbers may, however, if commercial facilities are not at hand, do his own treatment. Professor R. W. Smith, of the New York State College of Forestry, who has made an investigation into the subject, says that satisfactory equipment for the treatment of fence posts can be installed for five dollars and consists only of an ordinary sprayer and drum of 100 gallons capacity. Or the cresote may be applied with a brush or by spraying, but immersion in the open tank is best.

It may be pointed out that railway ties are usually treated under high pressure so that the preservative material is actually forced into the wood structure, and that in consequence superficial treatment by dipping or with a brush is not sufficient.

R. V. Look, president of the Canada Cretosine Company, writing in the Engineering Journal, says:

"In sound timber decay can occur only from outside agencies. If the surface of the wood is rendered resistant to wood destroying fungi, the timber will remain sound. This contention is doubtless correct and when the surface of a piece of timber is preserved and the surface protection is completely maintained, the timber may last for a considerable period of time. Unfortunately, however, materials so treated are almost certain to have the protective coating broken through through abrasion or checking. When this happens, the untreated interior is at once attacked by the fungus of decay and the effect of the treatment is completely destroyed."

Cresosine is not the only material now being used for this purpose, however. There are many others of which the best known are sulphate of copper, chloride of zinc and liquid sulphur.

Infusing wood with sulphur is a rather recent development and there appears to be considerable interest, notwithstanding the fact that many tests will have to be made before the properties imparted by the treatment. Practically all woods may be impregnated by immersion in molten sulphur by a simple open-tank method, and the quantity of sulphur absorbed varies within wide limits, depending largely upon structure and characteristics of the species.

The wood is generally immersed and held beneath the surface of the sulphur bath, which is maintained at a temperature of 190 to 225 deg. C. for five or six hours, or until all evidence of moisture has disappeared. It is then advisable to allow the temperature to drop to 125 or 125 deg. for either four or five hours, the excess of sulphur is removed. The extent of penetration is generally evidenced by the buoyancy of the wood in the sulphur bath and slowly complete cessation of bubbling. A fully impregnated piece of white pine will expose only about one-fifth of its volume above the surface and will, of course, sink in water. The following table indicates the percentage of sulphur absorbed by certain woods:

Popular 76 per cent
Cypress 60 per cent
White Spruce 50 per cent
White Pine 25 per cent
Red Oak 10 per cent

Manitoba's Financial Surplus

Another indication in the encouraging condition in Western Canada, its growth in the financial sphere, is the province of Manitoba recently advised by Premier John Bracken. The report shows at the end of the fiscal year on April 30th last, the province had a surplus of \$600,000, the largest annual surplus in the history of Manitoba. It is a fact that the province is a practical farmer. Before becoming premier of Manitoba in 1922, he was president of the Manitoba Agricultural College.

A girl has it rather power to make any number of men fall for her by declining to marry them.

W. N. U. 1627

Dairying in the West

Most Remarkable Growth of the Industry in Manitoba

In an address given recently before the Winnipeg Kiwanis Club, L. A. Gibson, dairy commissioner for the Manitoba Government, stated that in his opinion the grain belt or the prairie of Western Canada would be in time become the premier dairy producing area of Canada. "The western provinces of Canada are passing through the same experience as the middle west states did forty years ago," he said. "In the United States, Wisconsin, Minnesota and Iowa had occupied relatively the same position as did Manitoba, Saskatchewan and Alberta in Canada. They were then the great grain producing regions of the nation. Today, they lead in output of dairy products."

Something of the growth of the industry in Manitoba was explained by Mr. Gibson when he said that in 1912 between 50 and 60 carloads of creamery butter were shipped from Manitoba from Ontario and Quebec. In 1913, the imports had been 25 carloads and in 1914, 20 carloads.

In 1915, Manitoba produced enough butter to meet market requirements and also shipped out of the province 50,000 lbs. of butter. This had been increasing each year until in 1922 the province had exported 325 carloads, valued at \$2,500,000.

The British market was proving to be the best for surplus butter of the west. China and Japan required several million pounds each year, and Alberta was taking care of this.

Damage Caused By Smoke

Accide Harmful to Vegetation Area Carried Many Miles

Smoke alone is responsible for an immense amount of damage to living vegetation, but, when combined with mist in a dense smoke fog, it plays havoc with plant life.

In a paper read by Mr. Robert A. Croft before the British Commercial Gas Association at Plymouth, England, showing figures were given as to the amount of damage done by smoke fog. It was estimated that the average loss per acre mile during the year ending March 31, 1924:

This smoke fog contains acids which are very harmful to vegetation. Hardly a laurel is killed in two years when growing in London, in the heart of industrial London. In smoke-infected areas grass is coarse and poor quality; sheep do not thrive on these pastures; autumn flowers cannot be grown.

Nor do outlying districts escape. Professor Cohen, of Leeds, has stated that smoke from an industrial town will easily travel 50 miles or more. The soot particles settle at a very low rate; a particle shot from the top of a chimney 100 feet high would take nearly three weeks to settle. This, says Mr. Ashcroft, is a very important factor in the horticultural and farming industry as the question arises as to how far crops are affected by this drift of infected air from towns.

Canada And Its Constitution

Governor-General Speaks of His Reaction For the Land of the Maple Leaf

What is best in the constitution of the United States and best in the constitution of Great Britain make up the constitution of Canada, said Lord Bessborough, Governor-General of Canada, recently in a farewell address given before the Canadian Club at Victoria, British Columbia. Lord Bessborough is Governor-General of Canada ends next September.

"Although I am not a Canadian by birth or heritage, I am an 18 carat Canadian by affection," he said.

"When I go home I am going to say: 'I have seen a nation of whose future I am full of optimism.'"

"You have a country where a word of God has given you a most wonderful soil, a most wonderful frontier, and a most wonderful future."

"You have a country where a word of God has given you a most wonderful soil, a most wonderful frontier, and a most wonderful future."

"You have a country where a word of God has given you a most wonderful soil, a most wonderful frontier, and a most wonderful future."

Modern Nursery Lore

Dorothy—'I've looked all through this Mother Goose book, but I can't find that poem about 'Little Bo-Peep' and her sheep."

Once the aviators have reached the North Pole the next stop will be Mars.

When you read good money after bad it never catches up.

Defects That Shorten Life

Almost two million deaths that could shorten life and impair working capacity were found in nearly one-half million people examined by the U. S. Extension Institute, according to Dr. Eugene L. Fisk, medical director of the Institute.

More than 60 per cent of these defects were preventable or curable, Dr. Fisk said.

"The business of living should be run like any other business," said Dr. Fisk, "not by watching daily fluctuations or worrying about them, but by periodically checking up the trend of the business and then manfully moving to correct anything that is wrong."

"It is folly to watch oneself live constantly to see oneself as a perpetual moving picture scenario."

"Especially as one grows older, it is wise to abolish birthday celebrations, and to live day by day according to one's condition and capacity instead of by the birthday record."

"The next gain in public health will be in the working and playing period of life. The playing period should be as long as the working period—up to 50, 50 or 100 if it can be reached."

"The idea that play comes in early life is just as wrong as the idea that it should wait with the sole object of earning enough to stop work and play."

Free Contribute To

World's Progress

People Could Do Much More Educative Work

It is a fact often commented on among educators that out of the millions of men and women who have been killed since time was recorded, relatively a few thousands of brains have been lost to the world.

It is above the level of savagery. As agents of civilization hundreds of millions of people are negligible according to students who are trying to prospect what the future of the universe will be.

Manitoba's Cream Production

Manitoba's cream output for the month of April gives indication of a prosperous season. Butter production increased over the corresponding month of last year by nearly 50,000 pounds. In addition the receipts of high grade cream are 14 per cent over the same month of 1925. Cream graders of the province have been increased from 25 to 50.

As soon as the poor harbor begins to searpe acquaintances he cuts them.

Canadian Eskimos Nearing Extinction

White Man's Conditions

The Eskimos of the Canadian Arctic are doomed to early extermination unless prompt methods are adopted by the government for their protection, in the opinion of Capt. Henry Tuck, retired Arctic trader, with ten years' experience of the far north.

"The export of caribou skins from the Northwest Territories needs immediate action," on the part of the Canadian government," Captain Tuck declared. "It should be definitely stopped and the plea that caribou are being transferred from sections where they are plentiful to less fortunate areas may be discarded as a policy of robbing Peter to pay Paul."

Recent careful estimates of the Eskimo population of the Canadian Arctic set the total at 4,500 souls, with a steady decrease. Against this the Eskimo population of Alaska is today 12,000, and shows a steady increase over a 20-year period, while Greenland's Eskimo numbers over 15,000, with an increase stretching back for sixty years.

"The Eskimos," he continued, "are being changed from a hunting of sea animals into a trapper, and in the latter practice is compelled to go far inland monthly after white fox, and to live through the winter on flour and other farinaceous food given him by the white man, sked out with what fatness he can should and his later life is in poor shape in the spring season."

Disquieted in this transition, Captain Tuck explains that the Eskimo's old diet was sea meat, and his customary winter habitat the ice. These exchanged for inland conditions and white man's rations were so important his vitality that he became an easy prey to pneumonia and influenza. It was a matter of regulation by the government.

C.N. Team Wins Prize

The number one team of Fort Rouge shops, Canadian National Railway, Winnipeg, was successful in bringing the 1925 Thornton trophy, after the much coveted Montclair trophy given for the first all champion province of Canada. This team also holds the 1925 Thornton trophy, after the first all champion province of the Canadian National Railway system.

Manitoba Needs Population

No Fear of Over Production of Agricultural Or Dairy Products

Dealing with 'Manitoba's immediate needs,' Deputy Minister of Agriculture Evans delivered a striking and strongly addressed address at the opening day of Farmers' Week, before a joint meeting of the service clubs at Brandon recently.

Manitoba's chief need is more Manitobans, said Mr. Evans. There was only a slight reduction in the number of immigrants to this country that at the present time, he said. He held that the tide had turned as far as immigration is concerned from the U. S. to Canada. The flow had turned towards Canada from the States, and under the quota regulations there were none countries that were barred from sending more immigrants to the U. S. for the next 20 years. He stated that Canada was more and more meeting the market requirements of Great Britain, and that there was not the slightest fear of over-production in the country of livestock, agriculture or dairy products.

Large quantities of fish are taken from the lakes accessible from the Hudson Bay Railway. Commercial fishing, in the vicinity of the Pas alone has an important value for the season, not including large quantities of local wild dog which focus an important trade. The fishing for sea fish is done largely in winter by bringing through boats to the ice, the product being shipped in a frozen condition. Besides the large fish hauls to the railway, sometimes necessary, the industry has on the whole been a success. The quantities are also sent via Selkirk from Lake-Winnipeg where regular fleets are employed, and from the adjacent lakes.

A branch railway through the mineral fields of Northern Manitoba, such as has been planned, would also make accessible several large inland lakes favorably stocked. There are so many fish in some of the lakes that the present small inland lakes would be more beneficial than otherwise.

Shipping Buffalo North

First Quota of Animal Shipments From

Wainwright Here On the Way

The first quota of the second annual shipment of buffalo to the north, consisting of 250 three-year-olds, left Wainwright recently in specially equipped steel framed stock cars. The animals, which were housed while traveling via Canadian National to Wainwright, from which point they will be transported by snow to a point within fifteen miles of Fort Fitzgerald, where they will be turned loose to roam with native herds in that district and probably join up with last year's migrants from the prairie. Monthly seasons were entered during the summer and loading had no accident occurred.

Expect Heavy Traffic

In spite of the fact that there are no especially large conventions this year at the coast, the volume of tourist and holiday traffic that will find its way to British Columbia and Western Canada this summer will be as great, if not greater, than ever, in the opinion of C. E. Usher, general passenger traffic manager of the Canadian Pacific Railway.

Equipped with a very sensitive telephone, the device has been invented to test the strength of metals by the sounds they make under strain.

Whalers from the United States and Europe have visited Hudson Bay regularly for the past century but due to the gradual extinction of the right whale, the industry has been declining. The Hudson's Bay Company, in addition to large catches for the use of its employees and their families, has been known to export whale blubber and as a by-product in regular export trade with the Old Country.

There is need for the study of the habits of the northern fish so that definite regulations and administrative improvements could be effected not only to preserve existing species, but in some cases to supplement them with new stock and to encourage the taking of destructive fish and animals who prey upon the food fish.

It is possible that an inspector of the fisheries branch of the federal department of marine and fisheries will be sent to Hudson Bay during the present summer to obtain information respecting fishing prospects in these waters.

The completion of the Hudson Bay Railway or the Trans-Manitoba and Northern Ontario Railway to the coast would be of great benefit in the development of these fisheries as a direct route would then be available to American and Canadian western or to Ontario markets.

Canadian Egg Production

Increased Consumption Through Egg Grading Regulations

Egg production in Canada has increased by over one hundred million since 1913, and only partly because of a recent statement by Hon. W. H. Miller, former Canadian minister of agriculture, who has estimated that this enormous volume of eggs has been consumed almost entirely in Canada as a result of the improved quality and larger size of eggs produced here, and the application of the egg regulations. Canada's egg production in 1923 was one billion and forty-four million, and in 1925 two hundred and forty-nine million dozen. But whereas in 1923 Canada consumed only 164 million eggs, in 1925 it consumed 283 dozen.

Neptunite Varnish-Stain

Make scuffed or faded furniture like new with this splendid Varnish-Stain. It is exceptionally easy to apply and dries to a beautiful mirror-like gloss that is free from stickiness. It retains its beauty for a surprisingly long time and does not fade.

Splendid for floors, furniture and woodwork. For graining—beautiful effects, representative of the grain of handsome hardwoods can be obtained with Neptunite Graining. Compound finished with Varnish-Stain. Comes in six attractive shades.

Neptunite Varnish

Lowe Brothers Neptunite Varnishes are ideal for either Exterior or Interior use.

They have the distinction of being the only varnishes made that have successfully withstood the heat from a Hot Iron on their surface. They will not turn white, crack under the hammer test, or show heel marks. Ice, snow or rain have no effect on them. They produce a remarkably beautiful finish; they wear longer and cost less than most good Varnishes.

Lowe Brothers HIGH STANDARD OUTSIDE PAINT

Lowe Brothers Liquid Paint costs approximately 1c per square foot. This is another way of saying that "job cost," which should always be the measure of your painting cost, "High Standard" is the most economical paint you can buy.

The reason is to be found in its exceptionally high quality, the fineness to which it is ground and the purity of materials used.

It gives a very high gloss. Wears evenly for years and comes ready for use in thirty handsome shades, and is very easy to apply. Try it when next you paint.

Price—1/2c. Sq. Ft.

Porch Floor Paint

Is Specially made to withstand the extreme hard usage to which a verandah floor is subjected. The scraping of feet and verandah furniture will not affect this finish when properly applied. It will stand up under the rigours of the weather and preserve your verandah floor for years.

Like all Lowe Brothers Products, Porch Floor Paint is very economical. It is easily applied and a pint of this paint will go almost as far as a quart of most any other so-called "cheap" exterior floor paint.

Porch Floor Paint is made in a splendid range of colors, one of which is sure to please

Mellotone Wall Paint

Walls that are finished with Mellotone need never be marred with finger prints or dust spots. Mellotone is washable, it may be washed with soap and water just as often as necessary without injury to its delicate beautiful finish. Mellotone combines all the durable qualities of an outside paint with the soft, attractive rest tones that are so much desired by particular people. Mellotone is so easy to apply that it lasts so long that its first cost is practically nothing. Comes in 16 beautiful shades.

Hard Drying Floor Paint

This is the floor paint that does away with the back breaking drudgery of scrubbing. Simply mop this high gloss finish and you have a floor to be proud of.

Hard Drying Floor Paint is a floor enamel of exceptional toughness. It dries over night with a glossy and elastic surface that will stand a very amount of wear and will not chip off or crack. Made in a variety of popular colors, ready for use.
